Directions (Q. 136 – 144): Read the following passage carefully and answer the questions given below it. Certain words/phrases are printed in bold to help you locate them while answering some of the questions.

Monopolies are bad in national politics and worse in international politics. The unipolar world led by the US is an example of political monopoly. In the language of history and politics, monopolies are discussed in terms of balance of power. What we have today is an imbalance of power. The US-led war against Iraq needs to be seen in the context of this imbalance. There has been much talk about the need for a multipolar world as an ideal solution to the existing anarchy in the international arena. The US and UK combine have been considered to be the perpetrators of the war. They disregarded global public opinion and have gone outside the mandate of the United Nations. This is an indication of US considering itself the only superpower. Its consideration may be justified because it has all the **pervading** might and also the necessary will. Its might is in two domains : one, military and the other economic. On every issue of any importance that **confronts** foreign policy-making of any country, US interests becomes vital. This omnipresence of the US makes it different from any other country. Some political observers argue that this is temporary; that the Russians will be back; that the Germans, Japanese, Europeans are coming; that China is not far away. In short, we occupy a period of **metamorphosis** from a bipolar to a multipolar world, a period that may constitute a unipolar moment but that phase may be over shortly. When will this unipolar moment be over? None has the answer to this question. Most observe

view US as somewhere between primacy and dominance, depending on the issue. The main question is how to deal with hegemony, primacy or dominance. In dealing with a big power, a smaller power must choose either balancing or bandwagoning or hiding. In a unipolar world, the general trend of foreign policy will be to **bandwagon**. Middle powers will need to bandwagon less than small powers and on particular issues may be able to balance or hide.
